

Audavi's TAA compliant 250GB MediaPac storage solution available to all DOD and Civilian agencies through HP ADMC-2 contract.

San Jose, CA, June 17, 2009 – Audavi Corporation today announced the availability of a custom 250GB MediaPac cartridge to all DOD and Civilian agencies through the Hewlett Packard ADMC-2 (Army Mobile and Desktop Computing) contract. The MediaPac® cartridge is based on state-of-the-art 2.5-inch hard drive technology comes with a waterproof crush-resistant carry case, boasts a rapid 60MB/s sustained data transfer rate over a choice of e-SATA, FW800, FW400 or USB 2.0 connection, and is TAA compliant.

"Our new 250GB MediaPac cartridge was designed to meet the needs of our DOD and government customers. The option of FW400, FW800, and e-SATA connections avoids the current concerns with USB 2.0 devices. The inclusion of a convenient water-proof and crush resistant case allows you to conveniently transport the cartridge and cables without fear of damage or loss. The TAA compliant design ensures conformance with DOD, GSA, and other government contracts allowing for seamless integration by our current military, government, and professional customers who continue to demand increased storage capacity and performance," according to Mike Bergkamp, CEO of Audavi.

MediaPac cartridges are designed for users who require convenient portable storage or back-up of large audio, video, and data files. MediaPac cartridges are also an excellent solution for military and government applications requiring removable media for data security and system classification. Rugged enough to survive a 2-foot drop onto concrete, the MediaPac cartridge is an excellent alternative to tape for client data backup and disaster recovery, medical image storage, and security video recording. MediaPac is significantly faster than "burning" CD/DVD disks for data back-up and archive applications. MediaPac cartridges can move easily from system to system using any of the standard interfaces (USB 2.0, FW400, FW800, or e-SATA).

About Audavi Corporation

Audavi designs, manufactures and sells a range of rugged portable storage solutions that enable military, government, and professional users to securely record, store, and transport digital video and data. MediaPac® is quickly setting the standard for capacity and performance for removable media in these demanding market segments. Headquartered in the Silicon Valley, with partners in Europe, Australia, and Asia, Audavi sells and supports its products worldwide. For more information, go to www.audavi.com.
